Lighting Effect Setting(FN Combo Key Function)

1. FN + DEL floating light:

The default floating mode, triggering into the constant light mode again,

2. FN + Insert Dragon and Phoenix Dance (light effects):

Animation 1: Fly the light strip to the two sides with the center of the keyboard as the center, no background color;

Animation 2: Press again to center the middle of the keyboard to the ribbons on both sides, with a background color.

3. FN + Home Full keyboard breathing:

The keyboard backlight simulates the breathing mode, which realizes the curve change of the backlight brightness from the extinction to the highest brightness.

4. FN + PgUp :Touch superficially

The default keyboard backlight is off. When the button is triggered, the button is centered as if it is water, and the light wave spreads around.

5. FN + End Pointing to the mountains:

This mode can customize the on and off of each button LED. When entering this mode, the last defined effect is restored by default, and the triggering enters the defined LED mode again, and the indicator light flashes. The trigger button can switch the LED on and off. After the definition is completed, it will trigger the exit definition mode again and save the definition result. The default 5 custom functions, a total of 10 sets of custom backlight, press FN + 0-9 to switch.

6. FN + PgDn is accompanied by:

The default backlight is off, the button is pressed, the button is illuminated, and the button is released slowly.

7. FN + SL (ScrIk) Horse Race / Hot Wheel:

The first gear is a horse race, with the Pause key as the starting point, running around the center with a trailing loop.

The second gear is a hot wheels, and the backlight runs around.

8. FN+APP (the button on the right side of FN) switches the ambient light around, and is always on/breath/off 3 files.
